## *Denials of Washington's Links to Murder of Russian General Igor Kirillov Highly-Suspect*

The mysterious assassination of General Igor Kirillov raises suspicions of a covert connection between U.S. biolabs, Ukraine, and the broader geopolitical interests of the West, highlighting potential motives linked to sensitive military research.

Maria Zakharova, speaking for Russia's Ministry of Foreign Affairs, confidently dismissed U.S. State Department claims of no involvement in the killing of Lieutenant General Igor Kirillov, Russia's chief of Nuclear, Biological, and Chemical Protection Troops. Zakharova had accused the U.S. of creating and funding the Kyiv regime, supplying it with weapons, and failing to condemn its terrorist acts. The suspicious timing of such assassinations can be compared to historic high-profile killings before major events, from WWI to operations in Afghanistan.

General Igor Kirillov's death is most likely connected to sensitive documents

Such assassinations, often aimed at demoralizing Russia and targeting those Kyiv considers war criminals, which Ukraine defends as legitimate wartime tactics, raise many questions. Knowing Kirillov's access to sensitive documents and possessing many of the same and similar materials, I can offer some insights into the "likely motives" behind him and his deputy being blown up in Moscow.

### **Peter Daszak, Spooky Guy with a Checkered Past**

A very spooky guy from Eco Health Alliance, with a Ukrainian father, Peter Daszak, President of EcoHealth Alliance, a global nonprofit organization dedicated to protecting wildlife and public health from the emergence of disease. It should come as no surprise that this person is connected with BSL 3 labs Worldwide, Ukraine, Georgia and China.

This was also one of the main players at Lugar Lab, Tbilisi, Georgia too, at least when it comes to bat research and diseases transmitted between animals and humans (zoonosis). It is claimed Daszak is a fellow traveller with the Bat Lady from Wuhan, China. Coincidence or not, the British zoologist and president of EcoHealth Alliance Peter Daszak provides much revealing information in a video that was originally taken on Dec. 9, 2019, three weeks before the Wuhan Municipal Health Commission announced an outbreak of a new form of pneumonia.

EcoHealth Alliance presents itself as a nonprofit that protects the world from the emergence of new diseases and predicts pandemics. Since 2014, Daszak's organization has received millions of dollars of funding from the U.S. National Institutes of Health (NIH), which it has funneled to carry-out research on bat coronaviruses.

There are other suspects to investigate: Daszak was named by the World Health Organization as the sole U.S.-based representative on a team sent to investigate the origins of the COVID-19 pandemic, a team that also includes Marion Koopmans, Hung Nguyen, Fabian Leendertz, and Christian Drosten. This is more than coincidence, especially since many believe COVID is not naturally occurring, and if made in a lab, nature is not picking up where lab workers left off.

To many ducks are lining up, COVID-19 pandemic On February 9, 2020, Newt Gingrich invited Daszak as a special guest along with Anthony Fauci on Newt's World to discuss the coronavirus and how it could potentially evolve into a global pandemic.

### **A lizard loving kid!**

As one source describes, Dasak is not very honest, and the cover face, poster boy, for disguising military research and experiments. He started out as was in zoology, e.g., a lizard loving kid, who studied reptiles and then was able to help wife a job at CDC in Atlanta, he

tagged along unemployed with her and “suddenly” got a job coordinating virus research among seven (7) USAID and DoD universities.

Coincidence or not, Daszak described during the Ebola outbreak in West Africa in 2011, “*Our research shows that new approaches to reducing emerging pandemic threats at the source would be more cost-effective than trying to mobilize a global response after a disease has emerged*”.

As the NYTs reported, in October 2019, when the federal government “quietly” cut off funding to the ten-year-old program called PREDICT, operated by United States Agency for International Development (USAID)’s emerging threats division, much to the dismay of experts like Daszak, He was worried that that shutting PREDICT down, could “*leave the world more vulnerable to lethal pathogens like Ebola and MERS that emerge from [unexpected places], such as bat-filled trees, gorilla carcasses and camel barns.*”

These disease sources can be considered as Red Herrings, and there is still great speculation that many of these Especially Dangerous Pathogens, EDPs, were manipulated in labs, and not only one country may be involved.

Daszak said, “PREDICT” a USAID project, was an approach to heading off pandemics, instead of sitting there waiting for them to emerge, and then mobilizing” in reaction. But in reality it was to seek out potential bio weapons.

EcoHealth also claims that it looks at the nexus between emerging viruses and how they affect public health, and what is underlying that ... and it is claimed that “almost” all emerging disease are linked to some underlying drivers, some cause that’s related to people: travel and trade and building roads into forests around the world,

*We have this unprecedented population growth. We’re doing things on the planet that we never used to do. We’re building roads into the remotest forests and what we do is we come into contact with wildlife species and pick up those artists. What we do at EcoHealth is to look at the relationship between people and animal, and the environment, and how that to pandemics and [then] we try and do something about it.*

Peter Daszak plays a central role in discussions about the origins of SARS-CoV-2. According to an expert collaborating with independent scientists investigating military labs, Daszak is widely viewed as a key figure of suspicion, allegedly disguising his self-interest as humanitarian work. Despite potential conflicts of interest due to his close ties with Wuhan and the Chinese Communist Party (CCP), Daszak headed up a WHO group in Wuhan and another group under the Lancet to investigate the virus’s origins.

General Igor Kirillov's death is most likely connected to sensitive documents reportedly involving Ukraine, Georgia, and the Lugar Lab in Tbilisi. These documents, (still classified and under investigation, detail a joint Georgian-U.S. military research project on diseases potentially affecting Georgian and Ukrainian military recruits. The project, primarily funded by the U.S. Defense Threat Reduction Agency (DTRA) in collaboration with the CDC and other institutions, outlines research objectives, budgets, and criteria for participant selection. Specific pathogens of interest, such as anthrax, are noted for their military relevance.

The WHO's decision to appoint Daszak to monitor COVID-19 outbreaks in China has been criticized as politically motivated. Articles by Henry Kamens (NEO) and Jeffrey Silverman (Veterans Today) support the allegation that that Kirillov's death and the likelihood of U.S.-Ukrainian collusion in bio weapons research are not coincidental.

Silverman, whose work often focuses on Georgia's unique geopolitical dynamics, has participated in RT documentaries on U.S. biolab activities and foreign policy. These documentaries have faced bans and restrictions on platforms like Facebook, reflecting their controversial nature, and bans for those who share the link with others.

The nexus between Daszak, the Lugar Lab, and broader U.S. geopolitical strategies are more than speculative. The closed-source verification and personally being involved with undisclosed documents, especially some of the actual documents which resonate within the context of broader Russian criticisms of Western intervention and bio-weaponization of animal diseases, (Zoonosis).

**Peter Daszak** a British zoologist and president of EcoHealth Alliance, which researches emerging diseases and zoonotic pathogens has too many links to controversial funding for bat coronavirus research at the Wuhan Institute of Virology, raising questions about his role in the origins of COVID-19 and the covert development of new bio weapons for offensive purposes, at various BSL3 labs as being funded and operated by the US government in blatant violation of the 1972 bio weapons treaty.

It is clear that what Lieutenant General Igor Kirillov had access to, as confirmed by others, and his knowledge and role in sharing of these documents may have be the main motivation for his murder.

Kirillov "most likely" had a treasure trove of either highly classified or sensitive information about the links of these labs to the acquisition, development, and potential use of weapons of mass destruction, including but not limited to highly resistant strains of anthrax.
